WHY FIBERGLASS?

- Fiberglass tanks weigh approximately 60% less than steel tanks, making installation easier.
- Fiberglass is sturdy. It is resistant to rust and chemical corrosion.
- Fiberglass tanks can be painted with regular latex house paint.
- Tanks are built to the customer's specification and can be manufactured for above or below ground.
- The fittings are integral to our fiberglass tanks, so there is no risk of leaking at these vulnerable locations.
- Fiberglass tanks can withstand extreme temperatures.

WHY RAINWATER?

- Rainwater is free! You can reduce your water bill by using rain water for your landscaping needs.
- Rainwater is naturally pure and fresh. It is not treated with chemicals and, unlike well water, it has zero hardness.
- By using rainwater, you can help conserve a scarce natural resource.
- Plants respond very well to rainwater. Rainwater can help to improve the health of your gardens, lawns, and trees.

WHY LFM?

- We have been building quality fiberglass reinforced plastic (FRP) tanks since 1974.
- We utilize the latest in chop filament winding equipment, therefore providing our customers with the highest quality fiberglass products on the market today.
- Our fiberglass RainWater storage tanks are engineered for the specific service conditions required by our customers.
- LFM's RainWater tanks are built to meet and/or exceed the strict requirements of ASTM D3299 and ANS/AWWA D120 specifications to assure our customers of the highest structural integrity, durability, and corrosive resistance.
- The primary goal of our professional delivery staff is to see to it that our fiberglass tanks are delivered on time and in a safe and professional manner.
